

## Hose Reel Roller Guide

The Four Direction Non-Snag Rollers are used at Roller Plate of the Hose Reel. These reduce abrasion and wear on the hose and keep the hose from binding or kinking. These are made of PVC (Polyvinyl Chloride) material and are available for all reel types from Small to XL.

## Brass Swivel for Hose Reels

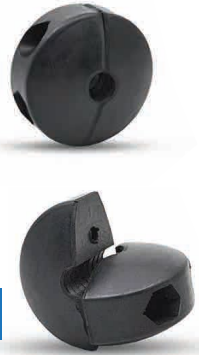

The Solid Brass 90o NPT Swivel Inlets are built for general multi-purpose applications. These are configured in a 90° degree full-flow fluid path design and protect against leaks. These are used at the external fluid paths of a hose reel to connect the lead-in as well as the air compressor with the Hose Reel. These support a working pressure of up to 3,000 PSI & -40°F to 400°F

## Rubber Stopper

The Rubber Stopper prevents the hose from pulling out to full extension. It also prevents the hose from slipping out of the hose guide and retracting too far into the reel. This spare part allows the desired length of hose to be permanently stored outside the reel. Also, these are adjustable rubber bumpers that provide a nonslip grip and long life to the hose.
